Analysis of Results

The percentage of sows with purebred litters has held steady over the last year remaining at 43%.

There has been a positive increase in the number of members keeping registered boars.

We are continuing to welcome new Welsh breeders to the BPA.

There has been a positive increase in the number of Aconite, Empress, Jean, Lucky Girl, Sally & Willing lines.

The Flora, Glamorous & Goldilocks lines still remain extremely vulnerable.

It is concerning that there is only one breeder with the Willing line & the number of breeders with the Daffodil & Goldilocks lines has decreased by half.

The Ted and Workman boar lines are now extremely vulnerable with the number of breeders now halved so work must start in earnest to improve these lines.

Geographically, whilst the overall regional distribution of both the boar and sow lines needs to be vastly improved there has been a rise in no's kept in some regions.

It should be an initiative amongst the Welsh breeders to spread / swop lines across the regions.

A challenge that needs to be met is to gain Welsh breeders in Scotland & N Ireland.

Targets

To distribute the Willing line to more geographical areas

To improve the numbers of the Flora, Glamorous & Goldilocks lines.

To get more Welsh boar lines into AI asap.

To improve the numbers of Ted and Workman boar lines.
